Property Address	Contractor
Please check one of the below	
<input type="checkbox"/> Manufactured	<input type="checkbox"/> Site - Constructed
Please check one of the below	
<input type="checkbox"/> Below Ground	<input type="checkbox"/> Above Ground
Has the storm shelter been verified by a independent, registered engineer that the shelter complies in all respects to existing quality standard by the National Storm Shelter Association (NSSA) available at www.nssa.cc ? This verification must include evidence of successful debris impact testing.	
<input type="checkbox"/> Yes, provide sealed engineering report/letter	<input type="checkbox"/> No

Check which of the following have been included in this application:

IN-GROUND (Please check yes or no for each question below)

Y N

- Has the structure been designed to handle hydrostatic pressures?
- Is the shelter ballasted to prevent uplift from buoyancy of saturated soils?
- Is the shelter able to resist deterioration from moisture and/or corrosive soils?
- Is the shelter adequately sealed to prevent water leakage?
- Is the shelter adequately vented to provide breathing air for maximum occupancy and to relieve atmospheric pressure changes accompanying tornadoes?
- Do the steps or ladders comply with NSSA or OSHA standards?

WITHIN EXISTING STRUCTURE (Please check yes or no for each question below)

Y N

- Do you have the required letter from a Licensed Engineer stating the existing house foundation shall not be compromised? If the house has post-tension slab that has been compromised, an engineer must provide a letter verifying the required repairs have been completed.
